

**ANAND  
MINERAL & CHEMICALS**

Since 2000

*"Unwavering commitment to the highest quality is the heart of our business."*

*We provided Best  
Minerals and Chemicals*

# DOLOMITE POWDER

Dolomite Powder is a white industrial mineral. It is available in abundance on the earth's surface. Hence, it is very economical and a widely used mineral filler.

# DOLOMITE GRAINS

Dolomite grains are pure white colour grains. We are manufacturing different sizes of dolomite grains. Dolomite grains are used in the Texture paint manufacturing industry.

# CHINA CLAY POWDER

China clay is the most versatile mineral. The physical and chemical properties of China clay make it a useful material for many industries. It is used as a primary content in the ceramic industry or as a filler in various industries.

## APPLICATIONS

**ANIMAL FEED**

**AGRICULTURE**

**WALL PUTTY**

**TOOTHPASTE**

**SOAP INDUSTRY**

**DETERGENTS**

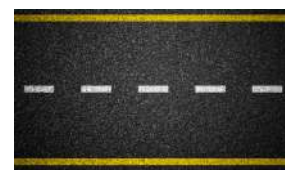

**PAINTS**

**WHITE CEMENT**

**STEEL**

**ROAD MARKING**

# CALCIUM CARBONATE POWDER

Our calcium carbonate Powder is made from Best quality stones sourced from India and abroad and designed To give Ultra smooth surface, high opacity & whiteness with lowest Possible abrasive index. We manufacture both uncoated Calcium Carbonate Powder and Coated Calcium Carbonate Powder

# TALC POWDER

The talc is known as "soapstone" is also widely used as a filler or lubricant. This soft rock is easily carved and has been used to make ornamental and practical objects for thousands of years.

# QUICKLIME POWDER

Quicklime, also known as calcium oxide or burnt lime, is produced by calcining pure limestone at temperatures exceeding 900°C. This highly reactive substance is vital to numerous industrial processes. Calcium oxide (CaO), commonly referred to as quicklime or burnt lime, is a widely used chemical compound.

## APPLICATIONS

COSMETIC

PLASTIC ITEMS

PAPER INDUSTRY

MASTERBATCHES

PVC

FILLER MASTERBATCHES

PHARMA INDUSTRY

# ANTI MOISTURE POWDER

Our firm is providing the best grade Anti Moisture Powder at nominal rates. This powder is mainly used for absorbing moisture content present in the plastic scraps or other materials. The provided powder is hygienically processed under experts supervision with the help of progressive technology as per set quality norms.

# DESICCANT MASTERBATCH

A desiccant is a substance designed to eliminate humidity and enhance extrusion and injection processes. A desiccant masterbatch gives a complete solution to the processor so as to reduce or remove undesired moisture. Moisture can be present in raw materials such as hygroscopic polymers, fillers, and pigments.

## APPLICATIONS

INJECTION MOULDING PRODUCTS

HDPE PIPES

BLOWN FILM PRODUCTS

CARRY BAGS

REPROCESSED GRANULES

BLOWN MOULDING PRODUCTS

# CALCIUM CARBONATE FILLER

Calcium carbonate filler ( $\text{CaCO}_3$  filler, also known as calcium carbonate masterbatch) has always been the most commonly used filler in the plastic industry. Their position has never declined despite the processing and modifying technologies that have been researched and applied more and more over years. In industries that use calcium carbonate filler, they are used in two forms: coated  $\text{CaCO}_3$  and uncoated  $\text{CaCO}_3$ .

# TALC FILLER

Talc Filler-Talc filler masterbatch is a mixture made of talc powder, base resin (PP, PE, HD, HIPS, etc.) and various additives such as dispersant additives, bonding additives, etc. So what is Talc powder? Talc is a metamorphic mineral in solid form.

## APPLICATION

TUBES

CHAIRS

TOYS

PP BAGS

PLASTIC BOTTLES
